Foreword

The Schools Health Education Unit (SHEU) is pleased to be able to produce your Report, which contains detailed information about the health beliefs and behaviour of your pupils.

The report compares the data collected from your pupils with those from a larger, wider sample.

SHEU is sure that you, your colleagues, and your pupils will also find the information contained within this report to be of value in helping you to gauge some of the most important factors that affect the lives of our young people both now and in the future.

SHEU hope that your pupils found the experience of completing the questionnaire interesting and thought provoking.

Finally, SHEU would like to take this opportunity to thank you for your support and co-operation in agreeing to participate in this valuable research initiative.

Introduction

The Health-Related Behaviour Survey, developed by the Schools Health Education Unit, is designed for young people of primary and secondary school age. The surveys have been developed over 40 years by health and education professionals, and over a million school children have taken part. In the last ten years, over four thousand schools and colleges have participated. Data arising from the survey can be used to inform planning decisions as well as being used in the classroom as the stimulus for discussion with young people.

This report should ideally be studied with reference to the original questionnaire and the survey results tables. The first is recommended because we may have paraphrased a question below for reasons of space, and the precise wording and position may be important for interpretation.

Preceding this report you should have had access to your online results, which contain more information than can be summarised here. You may want to refer to this if you want to look in more detail at the results of a particular question. The online results show the number of responses received for each question, which may be less than the total sample. Also in the Results Tables we show the results of each response for multiple-choice questions, whereas in this report answers may be selective or grouped.

A school's results are confidential and will not be shared with other organisations without the express permission of the school.

If you would like further details about Government policy background, we have created an overview which can be downloaded from our website at: <http://sheu.org.uk/content/page/appendix>.

Comparison figures

In this report the data gathered from this survey have been compared with a larger sample from your area. For example, if your school is in Exeter then the wider data might be Devon. This enables you to compare your results with others in the area and also go to the SHEU annual reports (summaries available at www.sheu.org.uk/publications) to find out about the UK statistics and trends.

If the figures in your survey have been compared with results from a reference sample, the reference figures are normally given second, and often in parentheses.

Administration

Staff in school will have been responsible for the classes selected for inclusion.

Anything special about the day of administration, or the pupils present and absent on that day, may affect the detail of the results.

The sample

This survey involved pupils from the following years. The numbers in each group are shown below.

	C&D			Southwark		
	Yr 4	Yr 5	Yr 6	Yr 4	Yr 5	Yr 6
Boys	92	78	171	493	262	521
Girls	68	72	151	410	245	497

Please note that 8 (26) pupil(s) identified themselves as other, while 10 (56) preferred not to say or didn't answer the question. These pupils will not be included in any tables or charts which are split by sex, however they will be included in any total figures.

Please note that if the proportions of younger and older pupils, or boys or girls, are very different in your school sample compared with the wider sample, then you may need to consider this as a cause when looking at any differences between your school and the wider data. Many of the headlines figures are broken by age and gender in the main body of the report, which will give more contexts for interpretation. Please contact SHEU if you would like to discuss.

If the sample you sent to Exeter for analysis was small, then it may have been aggregated by sex or year, or merged with a sample from another school or schools. This is done so that the figures are not too influenced by the behaviour of any one individual, and to ensure that the anonymity of the respondents is not compromised. If you would like to discuss this in more detail, please contact the Unit directly.

In the report, you may see '-' in the tables or text (e.g. '%').

This means we have suppressed the result because the number of valid responses for an item has dropped below 7 pupils. This may happen part-way through the report, if children start but don't complete the questionnaire for some reason.

Key Findings

In the chart below a coloured diamond represents Camberwell & Dulwich's result, while the hollow diamond represents the figure for Southwark Primary. The distance between the diamonds indicates the size of the difference between the percentages – the greater the gap, the larger the difference. The colour of the diamond reflects whether a difference is statistically significant and if the difference is positive (spots), negative (stripes) or if it is not statistically significant (solid).

Interpretation

In the chart below a coloured circle represents Camberwell & Dulwich's result, while the black line represents the mean for Southwark. The distance between the circle and the black line indicates the size of the difference between the percentages – the greater the gap, the larger the difference.

The colour of the circle reflects whether a difference is statistically significant and if the difference is positive (green), negative (red) or if it is not statistically significant (blue).

Significant Differences

Where differences can be seen between your school and the reference sample, you may find the enclosed table of some use in deciding if the differences seen are significant. The 'standard error' of a proportion is an assessment of how reliable our figures are, that is, the margin of error.

Two points in particular should be made:

1. when the sample size is small, it may be that just one individual voting a different way would make a large percentage difference to the results (so, one in twenty is 5%)
2. even if your sample is small, you may have a very high proportion of your available population – if, say, you sample every single pupil of your year 8 class. In this case, the notion of 'margin of error' doesn't really apply to the sampling, only to the process of collecting the responses.

TABLE OF STANDARD ERRORS OF PROPORTION

		Percentage seen in sample				
		10%	20%	30%	40%	50%
Number	20	6.7	8.9	10.2	11.0	11.2
In	30	5.5	7.3	8.4	8.9	9.1
sample	40	4.7	6.3	7.2	7.7	7.9
	50	4.2	5.7	6.5	6.9	7.1
	60	3.9	5.2	5.9	6.3	6.5
	80	3.4	4.5	5.1	5.5	5.6
	100	3.0	4.0	4.6	4.9	5.0
	150	2.4	3.3	3.7	4.0	4.1
	200	2.1	2.8	3.2	3.5	3.5
	300	1.7	2.3	2.6	2.8	2.9
	500	1.3	1.8	2.0	2.2	2.2

So, if you have a sample of 50 students and 30% of them think that the school needs a new swimming pool, we can see from the table that standard error of the percentage is about $\pm 6.5\%$.

Self esteem

This measurement is derived from the responses to a set of ten statements taken from a standard self-esteem enquiry method developed by Denis Lawrence (Lawrence, 1981). The scale is based on social confidence and relationships with friends. Overall the levels of esteem compared with Southwark Primary are:

Q15. Composite self-esteem score:

Data from the 'Young People in...' series reveal more girls than boys found at the lower end of the scale and more boys than girls at the higher end.

31% (38%) of pupils had a med-low self-esteem score (9 or less).
