

Child Health Profile March 2021

Southwark

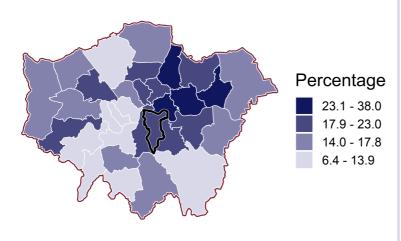

This profile provides a snapshot of child health in this area. It is designed to help local government and health services improve the health and wellbeing of children and tackle health inequalities.

The child population in this area

	Local	Region	England
Live births (2019)	4,027	117,897	610,505
Children aged 0 to 4 years	20,000	606,000	3,299,600

Key findings

Overall, comparing local indicators with England averages, the health and wellbeing of children in Southwark is mixed.

The infant mortality rate is similar to England with an average of 16 infants dying before age 1 each year. Recently there have been 7 child deaths (1-17 year olds) each year on average.

Public health interventions can improve child health at a local level. In this area:

- The teenage pregnancy rate is worse than England, with 93 girls becoming pregnant in a year.
- 3.7% of women smoke while pregnant which is better than England.
- 86.2% of newborns received breast milk as their first feed. Data on breastfeeding at 6 to 8 weeks after birth is not available for this area.
- The MMR immunisation level does not meet recommended coverage (95%). By age 2, 85.7% of children have had one dose.
- Dental health is similar to England. 22.2% of 5 year olds have experience of dental decay.
- 11.0% of children in Reception and 27.2% of children in Year 6 are obese.
- The rate of child inpatient admissions for mental health conditions at 76.6 per 100,000 is similar to England. The rate of self-harm (10-24 years) at 270.2 per 100,000 is better than England.

74.1% of children have achieved a good level of development at the end of Reception (better than England).

The percentage of young people aged 16 to 18 not in education, employment or training is worse than England at 8.8%. 109 children per year received their first reprimand, warning, or conviction. This gives a rate which is worse than England.

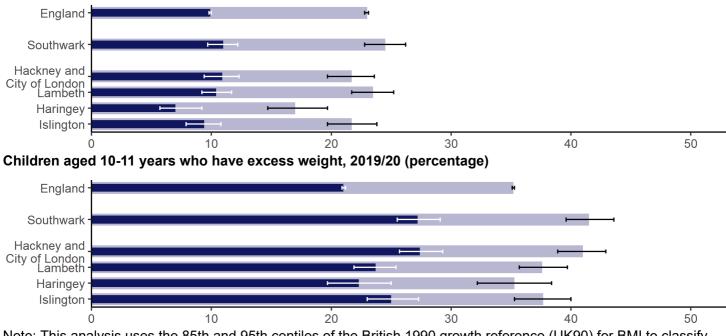

Southwark Child Health Profile

March 2021

Childhood obesity

These charts show the percentage of children who have excess weight (obese or overweight) in Reception (aged 4-5 years) and Year 6 (aged 10-11 years). They compare Southwark with its statistical neighbours, and the England average. Compared with the England average, this area has a similar percentage of children in Reception (24.5%) and a worse percentage in Year 6 (41.5%) who have excess weight.

Children aged 4-5 years who have excess weight, 2019/20 (percentage)

Note: This analysis uses the 85th and 95th centiles of the British 1990 growth reference (UK90) for BMI to classify children as overweight and obese. I indicates 95% confidence interval.

Young people and alcohol

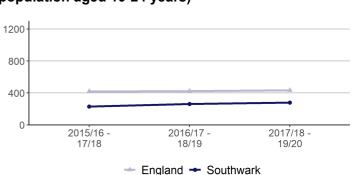

Nationally, the rate of hospital admissions of children and young people for conditions wholly related to alcohol is decreasing. This is not the case in Southwark, where there is no significant trend. The admission rate in the latest period is better than the England average.

Hospital admissions of children and young people for conditions wholly related to alcohol (rate per 100,000 population aged 0-17 years)

Young people's mental health

Nationally, the rate of young people being admitted to hospital as a result of self-harm is increasing. This is not the case in Southwark, where there is no significant trend. The admission rate in the latest pooled period is better than the England average*. Nationally, levels of self-harm are higher among young women than young men.

Young people aged 10 to 24 years admitted to hospital as a result of self-harm (rate per 100,000 population aged 10-24 years)

*Information about admissions in the single year 2019/20 can be found on page 4

Southwark Child Health Profile

March 2021

These charts compare Southwark with its statistical neighbours, and the England and regional averages.

Child development at 2-21/2 years

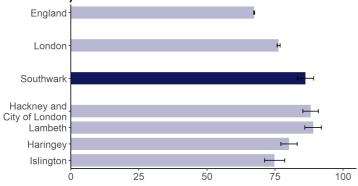

Children at or above expected level of development in all five areas at $2-2\frac{1}{2}$ years, 2019/20 (percentage of children reviewed)

84.9% of children aged 2-2½ years were at or above the expected level of development in all five areas of development (communication, gross motor, fine motor, problem-solving and personal-social skills) in 2019/20. This is better than the England average. A worse proportion of children were at or above the expected level of development for communication skills (83.3%) and a worse proportion for personal-social skills (83.7%) when compared with England (88.9% for communication and 92.9% for personal-social skills).

Breastfeeding

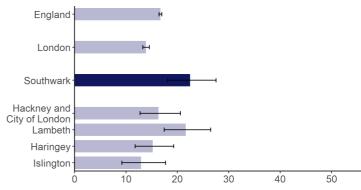

First feed breast milk, 2018/19 (percentage of newborns)

86.2% of newborns received breast milk as their first feed. Data on breastfeeding at 6 to 8 weeks after birth is not available for this area.

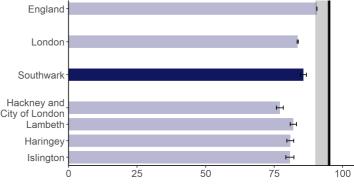

Young people's sexual and reproductive health

Teenage conceptions in girls aged under 18 years, 2018 (rate per 1,000 female population aged 15-17 years)

In 2018, approximately 22 girls aged under 18 conceived, for every 1,000 girls aged 15-17 years living in this area. This is higher than the regional average and higher than the England average. Chlamydia screening is recommended for all sexually active 15-24 year olds. Increasing detection rates indicate improved screening activity; it is not a measure of prevalence. In 2019, the detection rate in this area was 4,235 per 100,000 which is higher than the minimum recommended rate of at least 2,300.

Measles, mumps and rubella (MMR) vaccination MMR vaccination coverage by age 2 years, 2019/20 (percentage of eligible children)

The shaded area from 90% shows the range of values approaching the minimum recommended coverage of 95% (the black line).

Less than 95% (the minimum recommended coverage level) of children have received their first dose of MMR immunisation by the age of two in this area (85.7%). By the age of five, only 86.1% of children have received their second dose of MMR immunisation.
